

Leica GS18 I

Data sheet

Innovative

The Leica GS18 I is an accurate and easy to use GNSS RTK Rover. It utilises highly innovative Visual Positioning technology based on seamless integration of GNSS, IMU and a camera. It enables you to measure survey grade points in images on site and in the office. Create point clouds from captured data with Infinity to expand possibilities even further.

Fast

Designed to measure large amount of points efficiently. Leica GS18 I allows you to capture images and measure hundreds of points within minutes. There's no need to physically reach the point to measure it. This allows you to reduce time spent on-site and cut down re-work: once you captured the site, you can measure all details whenever you want to.

Versatile

Imaging power has changed the rules of the game. By having the power to measure what you see, you can now reach places you couldn't before without switching tools or climbing through obstacles. That gives you the flexibility in the field, frees up equipment and crews, and truly maximises productivity in your projects which results in increased profits.
